

simpleDocs

Installation and user guide for the Windows contextual AI assistant.

How to install

- 1 Download the ZIP, choose Extract All, and open the extracted folder. Do not run the installer from inside the ZIP preview.
- 2 Keep all six files together, then double-click **Install-simpleDocs.cmd**. No administrator access, account, login, or redeem code is required.
- 3 Wait for the successful installation message. The app is copied to your Windows user profile and opens in the system tray.
- 4 Confirm that the simpleDocs tray icon is visible. You can also search for simpleDocs in the Windows Start Menu.
- 5 Select code or technical text and press **Ctrl+Shift+Space**. If the popup appears, installation is complete.

Why the installation files are required

appsettings.json provides the public production service address and no-login setting. **Install-simpleDocs.cmd** is the file users can safely double-click. **Install-simpleDocs.ps1** copies the app to a stable location, creates the Start Menu shortcut, registers automatic startup, and upgrades older versions. Keep these files beside CodeExplainer.exe while installing.

Get complete help from your usual AI

The included **simpleDocs-user-manual.txt** is one complete support prompt. Paste its full contents into ChatGPT or your usual AI assistant to give it the product, installation, usage, troubleshooting, privacy, research, and contact context. You can then ask questions naturally whenever you need help.

Daily use

Select the smallest complete code block, error, terminal message, equation, or technical passage that represents your question. For browser equations, select the formula rather than surrounding page controls. Press **Ctrl+Shift+Space** once and read the explanation in the popup.

Startup and updates

simpleDocs starts automatically after you sign in to Windows. Use **Start On Windows Login** in the tray menu to change this. When a newer ZIP is provided, extract it and run **Install-simpleDocs.cmd** again; the installer safely replaces the older installed version and repairs startup integration.

If it does not work

Confirm that the tray icon is visible and the internet connection works. Select the text again and press the hotkey once. If simpleDocs does not start after sign-in, open it from the Start Menu and check **Start On Windows Login**. Rerun the latest installer if files or startup registration are missing.

Privacy

simpleDocs requires **no account, login, redeem code, or personal API key**. simpleDocs does not save your selected content, generated explanation, or personal data. It is designed to provide a temporary explanation without creating a user profile or storing a personal history.

Our research

simpleDocs grew from our presented paper, *An OS-Level Contextual AI Assistant for Reducing Context Switching in Novice Programming Workflows*. The research explores helping novice programmers stay focused while reading code, learning, and debugging by bringing useful explanations into their current workflow.

Thank you for being part of the simpleDocs journey

Thank you sincerely for choosing our tool. I would be very happy to connect with you, hear about your experience, and talk about your ideas, your programming journey, or the research behind simpleDocs. Your honest feedback - what worked well, what could be clearer, and what you would like next - means a great deal and helps this work grow.

Kindly connect with me on LinkedIn and let us continue the conversation. You are also warmly invited to stay connected and join me as I build and share other products and research projects. Every message and suggestion is welcome.
